## TV Show - a Successful Implementation of Media-Rich Website

One of the largest media groups in Europe, required an interactive website to give an overview of its broadcasts to the audience and to allow program fans to communicate with each other. TV Show website enables users to view not only video and photo materials, but also advertisements of upcoming shows. Visitors are enjoying the opportunity to vote online and discuss videos in the forum.

Website is based on the Mambo content management system. It is managed by administrators who work with user accounts and backend systems and by content managers who create and publish video, audio, photo and text files. It provides the client with the option to assign appropriate employees, consequently avoiding time and effort overhead usually exhaustive for content- and media-rich web projects.

- Powered by Mambo CMS**
- Video archive with integrated rating system, links to related videos, categories, etc
- Video Streaming Using MMS Protocol**
- Advanced opinion polls with statistics
- Website and video archive search
- External ads and banners
- Photo gallery
- Discussion forums for TV-shows
- The Clients**
- RTL-TVI - Belgian channel of RTL Group
- Skynet Belgacom - the biggest Belgian ISP

### Solution Delivered

Intellias took over the technical project management, development, and deployment as well as the post-production support of this project.

Functional requirements were defined according to Use-Cases, while non-functional requirements were defined according to URPS+ model.

The website is hosted on a dedicated server. During pre-production tests a demo server was setup aiming at pre-deployment and acceptance testing.

### TV Show Quick Facts

- ▶ 126 videos in 64 broadcasts
- ▶ 200,000 video hits
- ▶ 22,000+ hits for the most popular video
- ▶ 2,700+ poll respondents

## Expanding Cooperation: Music Club

TV Show project proved to be a success and the results perfectly met client's requirements and expectations. Therefore Intellias was subcontracted to develop another web-project - Music Club.

Our team has delivered both front-end and back-end functionality which is based on the Mambo CMS platform.

Music Club features advanced database of artists sorted by genres including biographies, interviews, discographies, videos, galleries and context links. Another section provides highlights of the forthcoming broadcasts.

Accordingly, Intellias confirms its success in delivering quality-for-the-price solutions to the most demanding clients. Along with that, our company continuously reinforces its image of a reliable software development services supplier.
